Work Experience

Software Engineer, Shippo
Jan 2016-April 2016

- Took full ownership of projects for new features and user flows from start to finish.
- Created new endpoints and filters for a RESTful API using Python and Django.
- Designed and Implemented new features for the Shippo Dashboard using Ember
- Wrote unit and integration tests for all added features.

Product Analyst , D2L
May 2015-Aug 2015

- Designed several iterations of a mobile design, as well as user flows for a new product.
- Wrote and conducted usability tests, and provided comprehensive summaries of results.
- Gathered and analyzed competitive intelligence information and completed design specifications for a product.
- Created an automated front end testing framework.

Lead UI/UX Designer, Nspire
Nov 2014-May 2015

- Designed and developed responsive webpages to connect students with industry professionals
- Worked remotely with web development team as well as on individual projects to create websites to advertise Nspire's initiatives

Software Engineer, Synacor
Aug 2014- Dec 2014

- Worked on a team to create an email web client in HTML5 and Javascript using an MVVM pattern that interacted with a RESTful API
- Collaborated with designer to enhance user experience using vector graphics and CSS3 animation
- Assisted in cross-device testing and optimized usability of application across phone, tablet, and desktop browsers
- Utilized the AGILE workflow, and Atlassian Software to track and create project tasks

Front End Development Coop, Genesys
Jan 2014 - May 2014

- Created a JavaScript library to interact with a Server API using AJAX
- Used Backbone.js, HTML5, CSS and the JavaScript library to create and style a web interface
- Designed and implemented new features for a web application
- Prepared instructional and technical documentation to guide future developers and users
